ABOUT

Software engineer with over 25 years of experience across mobile, web, and enterprise development. Throughout my career I have built production apps used by millions of users, led and mentored development teams, and consistently delivered complex projects on time.

I am currently pivoting towards AI engineering, driven by a genuine passion for the technology and its real-world applications. I actively build AI-powered products — integrating LLM APIs, voice AI agents, and predictive AI features into production systems — and I use AI tools daily as a core part of my development workflow.

I keep pace with the fast evolution of the AI landscape, continuously learning and experimenting with new models, tools and techniques. For me, AI is not a trend to follow — it is the next chapter to write.

Currently working fully remote from Tenerife, with availability for international projects.

AI PROJECTS

AI Phone Assistant Vapi GPT-5 API ElevenLabs Twilio
Self-employed · 2026 · Production

Voice AI agent that autonomously handles inbound phone calls for businesses: answers questions, books appointments, and provides information — with no human involvement. Built by integrating four external APIs into a working production system.

Restaurant AI Assistant Google AI Studio Flutter Gemini Predictive AI
Self-employed · 2026 · In Development

Hybrid Flutter app for restaurant management with AI-powered features: calorie calculation per dish, CO2 emission tracking, and stock consumption prediction based on order history. AI logic built using Google AI Studio (Gemini); app developed via vibe coding.

WORK EXPERIENCE

SELF EMPLOYED

Mar 2026 – Present

Developing products to distribute as SaaS: AI Integrations, Python

Developing Solutions for customers: Swift/ObjectiveC

Responsibilities:

- Create products using latest technologies: AI engineering, python, LLM
- Systematic integration of AI tools across the daily development workflow: local LLM inference for offline use (LM Studio), AI pair programming (GitHub Copilot in VS Code), AI-assisted coding and architecture (Google AI Studio, Claude Code, Xcode AI integration).

Achievements:

- Built a production voice AI agent that autonomously handles inbound phone calls for businesses: answers questions, books appointments, and provides information with no human involvement. Stack: OpenAI GPT-5, Vapi, ElevenLabs, Twilio.
- Developing a Flutter app for restaurant management with AI-powered features: calorie calculation per dish, CO2 emission tracking, and stock consumption prediction based on order history. AI logic built with Google Gemini via vibe coding. (In development)

---

iOS DEVELOPER

Medshr Ltd

Sep 2022 – Present

Permanent

Developing **MedShr app for doctors**: Swift/ObjectiveC.

Responsibilities:

- Participate to the daily standup
- Work close to the team leader, designer and CTO
- Add new functionalities and maintain the product
- Manage tickets on Jira
- Review and approve the pull requests on our github repo

Achievements:

- Working with a mix of architectures: MVVM, MVC, VIPER, ObjC, SwiftUI…
- Keep the crashes under 1%
- Improve the user experience

---

iOS DEVELOPER

Yoto Ltd

Mar 2021 – Aug 2022

Permanent

Developing **Yoto Player app**: Swift.

Responsibilities:

- Participate to the daily scrums
- Work close to the team leader and designers
- Add new functionalities and maintain the product
- Support and mentor junior developer
- Manage tickets on Trello
- Review and approve the pull requests on our github repo

Achievements:

- Changing the design patterns of the app: MVVM, reactive programming, dependency injection
- Keep the crashes under 1%
- Adding automated tests, with offline mocked data
- Creation of the CarPlay App

iOS DEVELOPER

Candyspace
Apr 2020 – Mar 2021
Permanent

Developing **iTV Hub Player app**: Swift.

Responsibilities:

- Participate to the daily scrums
- Work close to the team leader and the product manager
- Add new functionalities and maintain the product (ITV Hub player)
- Manage tickets on Jira
- Review and approve the pull requests on our github repo

Achievements:

- Start to work on a new company and on a big project from remote
- Implementation of new features from the beginning of the contract

---

SENIOR iOS DEVELOPER

iRiS Software System
Mar 2018 – Apr 2020
Permanent

Developing apps for hotels with: Swift, ObjectiveC.
The product was released as a white-label solution, customised and deployed for dozens of hotel clients worldwide.

Responsibilities:

- Build the architecture of the iOS project
- Identify risks to delivery as early as possible in planning or refinement
- Attend iOS Release Meetings and support Partners as the iOS expert
- Participate to the daily scrums as member or scrum master
- Work close to the team leader and the product manager
- Support and mentor junior developers
- Add new functionalities and maintain the product
- Manage tickets on Microsoft Visual Studio
- Review and approve the pull requests on our git repo with GitFlow
- Manage multiple targets for different build settings to generate around 50 different apps with the same core base

Achievements:

- Maintain and release top tier hotel apps all over the world
- Build scripts to manage the CI releases
- Support for RTL languages
- Fix critical Memory leaks
- To have reduced the number of bugs
- Successfully introduced Swift language to the legacy code
- Improving the Architecture of the app introducing new technologies, approaches, methodologies and tools
- Jump into a big project with a complex and fragile architecture, replacing in one month the old developer without any lack

SENIOR iOS DEVELOPER
Dynodend
Jun 2017 - Feb 2018
Permanent

Developing apps for customers with: Swift, ObjectiveC.

Responsibilities:

- Manage own tickets on Jira
- Participate to the daily scrums
- Work close to the CTO
- Work close to the UI Designer
- Support Junior colleagues
- Work with existing iOS apps to add new functionalities
- Create new iOS app
- Manage the API and add new functionalities
- Create and maintain web apps and web sites

Achievements:

- Creation of the infrastructure of a new iOS app (Social Network for Business) from scratch working close with the UI Designer and the other team members
- Add functionalities and bugfix of two existing apps (Chess app, Social Network for business), to release a new version on iTunes Store
- Add functionalities to existing API and, create new sections of a web portal (Social Network for Business), web app online
- Weekly manage and publishing of the new articles coming from the social media manager inside the portal

---

SENIOR iOS DEVELOPER

Glooxy Plus (Malta)
Feb 2017 - Apr 2017
Contract

Developing apps for customers with: Swift.

Responsibilities:

- Work on an existing iOS app (Find and rate Events and Places around the user) to fix the bugs
- Work on a business web app to create web quiz and make subscriptions with telephone operators around the world

Achievements:

- New version of the App released on time
- New quiz created and integrated with the phone operators custom APIs

---

Senior iOS Developer

(Italy)
Jan 2016 - Jan 2017

Freelance

Developing native apps for customers with: Swift, ObjectiveC, and hybrid apps with Ionic2, Cordova, Google Polymer.

Responsibilities:

- Liaising with the customers
- Manage the UI Designer
- Manage other developers
- Analysis, estimate and development new apps

Achievements:

- Acquired new customers
- Released new apps:
  - Bicycle App to track the rides and convert them in virtual coins.
  - National News App for the Councils and the Civil Protection.
  - News App for the Italian Federation of stationers.
  - Social Network App to sell and buy goods and services.
  - Beauty app to advertise the brand and products.

SENIOR iOS DEVELOPER

In.Sight (Italy)

Nov 2015 - Jun 2016

Contract

Developing apps for customers: Swift, ObjectiveC.

Responsibilities:

- Create an iOS app for blind people
- Teach an internal junior developer to work on iOS -Work close to the C++ developer to integrate a real time camera that analyze camera images with OpenCV library

Achievements:

- App released on time
- The junior developer was able to work alone after I left

Co-Founder / CTO

Eikony (Italy)

Sep 2013 - Dec 2015

Owner

Founder of a startup to create and consume digital magazines.

Responsibilities:

- Liaising with the customers
- Develop ideas into products
- Manage the UI Designer
- Manage other developers
- Analysis and develop new apps and APIs

Achievements:

- Released 3 apps for the CEI Vatican: The Holy Bible, Liturgia delle Ore, Cattedrali d'Italia
- Be invited to the Italian Expo 2015
- Create own product to create digital publishing and read it on iPad
- Create own product to take restaurant reservations
- Released a web app and an iOS app for an important Hospital
- One of the few Italian invited as Developer to the Apple Conference in London

---

Senior Mobile Developer

Arancia ICT (Italy)

May 2012 - Sep 2013

Contract

Developing native company apps and apps for customers with: ObjectiveC, hybrid apps with Cordova/jQueryMobile, Android Native JDE.

Responsibilities:

- Analysis and development new apps and web apps

Achievements:

- New company app created to manage holidays, illness and payroll
- New app created to book flights for a tour operator
- New functionalities on a business Web app released

Mobile App Developer

(Italy)

Oct 2011 - Apr 2012

Freelance

Developing apps for customers with: ObjectiveC, Cordova, jQueryMobile.

Responsibilities:

- Liaising with the customers
- Analysis and development new apps

Achievements:

- bugfix on an iOS app for a National Newspaper -bugfix on an iOS app for a National App to sell and buy good
- bugfix on an iOS app for an International beauty brand
- new app released for a national gym franchise App released on time

Mobile App Developer

Servizi Speciali (Italy)
Mar 2011 - Sep 2011

Permanent

Develop native apps for customers with: ObjectiveC, BlackBerry J2ME.

Responsibilities:

- Liaising with customers and with sales representatives
- software design and development
- managing software development team

Achievements:

- App released on time

DEVELOPER

Delisa Sud (Italy)
Jan 2000 - Dec 2006
Permanent

Software Developer, Technical Project manager.

Developing with:

Centura: Team Developer,Centura

Desktop: Microsoft Visual Studio6, Visual Basic 6

Desktop: Oracle: Forms Developer 2000, PL/SQL

Reporting: Oracle Report, Crystal Report 9

Enterprice: JAVA J2EE

Database: SqlServer DBMS, Oracle DBMS 8.x, Sybase, Microsoft Access/VBA

Responsibilities:

- Analysis and development new features on existing national councils desktop applications to manage electoral certificates, registry office, social services, mortgage…
- Data analysis and development of utilities to convert stored information from a database to another
- Analysis and development of reports

Achievements:

- software installed on more than 1000 customers, to manage hundreds of thousands of user information
- starting from a first work experience I came to manage a team of around 10 developers

SKILLS

AI TOOLS

GitHub Copilot, LM Studio, Google AI Studio, Claude Code, Xcode AI integration
